

# IT MONITORING that boosts digital performance

In a hyper-connected world that never sleeps, information technologies drive almost every aspect of organizations.

Users expect products and services to be available at all times, without interruptions or incidents.

If IT infrastructure fails, companies are exposed to negative impacts on profitability and trust. Therefore, they can't afford to fail. They must always be active.

**Therefore, they can't afford to fail.  
They must **ALWAYS BE ACTIVE.****

## centreon

### Comprehensive, holistic visibility, and business-oriented IT monitoring solution.

To reach their full potential and ensure operational excellence in their information systems, organizations need:

#### • Full Visibility on IT

An open and agile platform to monitor digital performance, from network to applications, and from legacy to state-of-the-art, Centreon covers all domains: Cloud, Virtualization, Microservices, Databases, Middleware, Systems, Storage, Security, Network, Hardware, IoT, ITOM services.

#### • Deploy anywhere

Monitoring without choosing between cloud, hybrid, or not-cloud environments.

#### • Monitor with the best total cost of ownership (TCO):

An affordable platform that can replace several legacy and/or obsolete tools with a lower TCO.

### Why Centreon?

**Complete visibility** through comprehensive digital performance monitoring.

**A comprehensive solution** that drives performance and aligns IT operations with business goals.

**An agile,** extensible, and easy-to-integrate platform based on open-source technology.

**+700 zero-configuration monitoring** connectors for cloud and not-cloud infrastructure visibility.
